PRECISION, QUALITY, INNOVATION

For more than 135 years, manufacturers, builders and craftsmen worldwide have depended upon saws and precision tools from The L.S. Starrett Company to ensure the consistent quality of their manufacturing processes.

They know that the Starrett name on saw blades, hand tools and measuring tools means exceptional quality, innovative products and expert technical assistance.

With strict quality control, state-of-the-art equipment and an ongoing commitment to producing products with superior quality, the 5,000 plus products in today's Starrett line continues to be the most accurate, robust and durable tools available.

This catalog features Starrett Band Saw Blades, their applications and characteristics.

INTRODUCTION

Starrett has been involved in precision tool manufacturing since 1880, sold products worldwide since the 1890s and introduced its first saw blade around 1890.

06

CHOOSING THE RIGHT BLADE

Terminology, Tooth shapes, Band Saw Blade characteristics, as well as PowerCalc, a mobile application that assists in the correct choice of the band saw blade.

10

BI-METAL SAW BLADES

The best solution for cutting a variety of ferrous and non-ferrous materials. These saws suit all cutting, economic or high production needs for any model of machine.

17

CARBIDE TIPPED

Ideal for cutting extremely hard, abrasive materials. Withstands extreme cutting pressures and offers a high resistance to wear and fatigue.

27

BAND SAW BLADES

CARBIDE GRIT, DIAMOND GRIT

Band saw blades coated with carbide grit or diamond grains are ideal for cutting abrasive materials with precision and excellent finish.

33

CARBON

Suitable for horizontal and vertical machines with manual or gravity feed. A complete line with a wide range of widths, tooth pitches and shapes.

35

WOOD CUTTING

A selection of carbon and bi-metal blades ideal for a variety of wood cutting applications.

41

FOOD PROCESSING

Constructed of the best quality specialty steels, polished and hardened to resist corrosion and contamination. These blades are the ideal choice for accuracy and efficiency at any food processing plant.

45

POWER HACKSAWS

The Bi-Metal or Solid High-Speed Steel (HSS) Power Hacksaw blades are manufactured by Starrett, available in metric and inch.

51

RECOMMENDATIONS

Recommendations to ensure longer life and better blade performance. Break-in and installation instructions.

57

ACCESSORIES

Pocket Laser Tachometer kit with case, Band Saw Blade Tension Gage and Band Saw Blade Alignment Gage.

60

RESOURCES

Find information on the Starrett website, PDF documents, and the new PowerCalc App to get the best performance from your band saw blade.

61

BAND SAW BLADES

Factories Around The World

1-Athol, Massachusetts, USA

2-Laguna Hills, California, USA

3-Waite Park, Minnesota, USA

4-Cleveland, Ohio, USA

5-Mount Airy, North Carolina, USA

7-Itu, São Paulo, Brazil

8-Suzhou, China

TERMINOLOGY

A-WIDTH

Tip of the cutting edge to the back of the blade.

B-BLADE BODY

Distance between the back of the blade and the gullet.

C-LENGTH

Measurement along the back edge of the blade.

D-THICKNESS

Measurement of the body of the blade.

E-BACK EDGE

Opposite side of the blade from the teeth.

F-TOOTH PITCH

Distance from the tip of one tooth to the next tip.

G-TEETH PER INCH/25MM

Number of teeth (constant pitch) per inch (25.4mm).

H-GULLET

The curved area between two teeth, where the chips accumulate until being removed.

I-TOOTH FACE

Surface of the tooth where the chip is formed. The tooth can have a positive, negative or straight angle. (Rake)

J-TOOTH SET

The side bending of the teeth to allow blade clearance through the cut.

K-BACK ANGLE

Angle formed by the back of the teeth and a parallel line to the tip of the same.

Primalloy™/Intenss™ PRO/Intenss™ PRO-DIE/Univerz™

- Positive Rake angle
- Double back angle
- Fast and efficient chip clearance
- Excellent choice for a wide range of cuts

Intenss™ PRO-VTH

- Variable tooth height providing pulsating action
- Easy penetration
- Ideal for cutting hard and difficult to machine materials

TENNAX™ - PRO

- Increased resistance to wear and tooth breakage
- Positive Rake angle
- Ideal for cutting pipes, tubes and structural profiles

Intenss/Duratec™ SFB/Duratec™ FC/Univerz™

- Neutral angle
- Shock resistant
- Excellent choice for a wide range of cuts
- Suitable for all types of machines

Duratec™ SFB/Intenss™ PRO-DIE

- Positive Rake angle, extremely aggressive
- Faster cuts
- Suitable for cutting ferrous and non-ferrous metals

Duratec™ SFB

- Neutral angle
- Shock resistant
- Suitable for cutting ferrous and non-ferrous metals

Advanz™ MC7/Advanz™ MC5/Advanz™ TS/Advanz™ CS/Advanz™ FS

- Differential tooth design, accurately ground
- Triple chip tooth geometry
- Faster cuts
- Ideal for cutting hard and difficult to machine materials

Advanz™ CG/Advanz™ DG

- Cutting edge coated with grains, continuous or with gullet
- Suitable for cutting abrasive or hardened materials

CHOOSING THE RIGHT BLADE

TOOTH

Constant Pitch

All teeth on the blade have uniform spacing, gullet depth and rake angle throughout the full length. Typically for general purpose cutting. Identified by one pitch number.

Variable Pitch

Size of tooth and depth of gullet varies to substantially reduce noise levels and vibrations. Cuts all structurals, tubing and solids smoothly and quickly. Identified by two pitch numbers.

SETS

Raker

A recurring sequence of teeth set left and right, followed by one tooth unset. Frequency of unset teeth on variable pitch blades varies depends on the tooth configurations.

Alternate

A recurring sequence of teeth set alternately left and right.

Wavy

Groups of teeth set to each side of the blade, with varying amounts of set in a controlled pattern.

Trapezoid

Special carbide cylinder, welded to an alloy backer, then precision ground with a high/low tooth form.

CHOOSING THE RIGHT BLADE

3 BLADE WIDTH

Use the blade width recommended by the machine manufacturer, except for contour cutting in vertical machines when you should use the chart below.

4 PITCH

Pitch is the number of teeth per inch/25mm. Cutting thinner sections requires a finer pitch (more teeth per inch/25mm). Thick sections require coarser pitches (fewer teeth per inch/25mm).

The charts are good guidelines. Because the cross section limits in the chart are broad and overlap, choose a coarser pitch if the speed of cut is most important.

Section to be Cut (in)	Constant Pitch (TPI)	Variable Pitch
5/32" to 3/8"	32 or 24	14-18
1/4" to 1/2"	18 or 14	10-14
1/2" to 3/4"	14 or 10	8-12
3/4" to 1"	10 or 8	6-10
1" to 1-1/2"	8 or 6	5-8
1-1/2" to 3-1/2"	6 or 4	4-6
3-1/2" to 7"	4 or 3	3-4
7" to 10"	3	2-3
10" to 16"	—	1/4-2
14" to 20"	1/3	1-2
16" to 32"	1/3	1-1/2
Over 30"	1	.8-1/3/9-1/1

- For cutting tubes and profiles, use the horizontal line to find the outside diameter (tube) or the largest section (profile). Find the thickness (tube/profile) using the vertical column. With that information, cross them to find the recommended pitch (chart below).

Tubes and Profiles

Wall Thickness in	Outside diameter of tube or maximum profile section length (in)												
	3/8"	3/4"	1-5/8"	2-3/8"	3-1/4"	4"	4-3/4"	6"	8"	12"	16"	20"	24"

5 BLADE LENGTH

The blade length varies according to the band saw machine type and specifications. Please find the correct blade length in your band saw machine user manual.

ON-SITE TECHNICAL SUPPORT

Starrett Saw Specialists are available to tune up and perform preventative maintenance on your production sawing machine using Starrett Band Saw Blades, at no additional cost. They fully review machine condition, blade mounting and operation in detail, making adjustments, as required, to help maintain good sawing and long life for both the machine and blades.

GUARANTEED BLADE SATISFACTION TRIAL PROGRAM

As a part of our Test & Trial Blade Program, Starrett Saw Specialists conduct on-site saw tests to observe your current blade performance and specific saw application. Our band saw testing process drives a data-driven approach to optimize performance and lower your cost per cut.

TRAINING

Starrett Saw Specialists can also instruct saw operators on achieving the best performance of blade and machine for your applications. Contact Starrett directly or your nearest Starrett distributor about arranging a visit to your workplace by a Starrett Saw Specialist.

PRECISION MAKES THE DIFFERENCE

PowerCalc

Starrett PowerCalc Band Saw Selector is an application that runs on any mobile device. PowerCalc selects the best band saw blade for the specified cutting application.

SPECIFY

- Band saw machine being used to make the cut
- Shape and composition of the material to be cut
- Details regarding any bundling of the material
- Whether or not it will be a cooled cut

PowerCalc automatically displays:

- Recommended Starrett saw blade
- Blade break-in information
- Cooling recommendations
- Cutting time and speed recommendations

BI-METAL BAND SAW BLADES

BI-METAL

TENNAX™-PRO

NEW
PRODUCT

The new bi-metal **TENNAX-PRO Band Saw Blades** by Starrett deliver next generation cutting performance on pipes, tubes, and structural profiles. TENNAX-PRO blades outperform competitive blades with lower noise, heat and vibration, and up to 25% more cuts per blade.

TENNAX-PRO Band Saw Blades replace Starrett Versatix MP. For cross reference support, please visit starrett.com

FEATURES

- New tooth geometry developed for cutting pipes and structural material profiles
- M42 High Speed Edge
- Exclusive tooth setting process

BENEFITS

- High level of productivity in extreme cutting processes used for pipes, profiles and structural materials
- Increased resistance to wear and tooth breakage
- Low noise, low vibration and improved cutting performance

APPLICATIONS

- Pipes, tubes, and structurals
- Small solids
- Bundles
- For all machines: manual, hydraulic, gravity fed, etc.

3/4" to 1-1/4" sizes available in 150' (45m) and 250' (75m) coils. 1-1/2" and 2" sizes available in 150' (45m) coils.

2-5/8" size available only in welded blades.

All coils supplied within plus or minus 10% of ordered size.

Furnished in welded bands for all widths, or in random coils for 3/4" to 2" widths. Special products on request.

BI-METAL

PRIMALLOY™

FEATURES

- Special high-speed steel edge
- Exclusive tooth geometry with positive rake angle
- Extended Life Treatment (EXT)-ensures maximum fatigue life
- Ground teeth

BENEFITS

High content of Cobalt and Vanadium guarantee:

- High production, longer operating blade life with high quality surface finishing
- Increased wear and heat resistance
- Easy penetration in hard and difficult to machine materials, increasing the blade performance
- Cost-effective over conventional bi-metal blades

APPLICATIONS

- Tool steel and high-speed steel
- Stainless steels
- Nickel and titanium alloys
- Hardened steel
- For machines with hydraulic feed control

Width x Thickness		Pitch/Rake	Material No.

1" to 1-1/4" sizes available in 150' (45m) and 250' (75m) coils. 1-1/2" and 2" sizes available in 150' (45m) coils. 2-5/8" sizes available only in welded blades.

All coils supplied within plus or minus 10% of ordered size.

Furnished in welded bands for all widths, or in random coils for 1" to 2" widths.

Special products on request.

EXTENDED LIFE TREATMENT (EXT)

The Starrett Primalloy Band Saw product line applies a proprietary Extended Life Treatment (EXT) to its alloy steel backing material. This process, in addition to controlled blast peening, enhances the fatigue life of the blade. The EXT applied during the peening operation adds increased residual stress into the surface of the blade. Higher stress levels aid in the reduction of fatigue cracks that originate along microscopic grain boundaries. The benefits of extended life treatment are proven with X-Ray Diffraction (XRD) and extensive mechanical fatigue tests. This process will soon be applied to most Starrett bi-metal and carbide tip product lines.

BI-METAL

INTENSTM PRO-VTH

bi-metal unique[®]

Starrett[®] IntensTM PRO-VTH

FEATURES

- Uniquely designed tooth edge with variable height and set
- Positive rake, ground teeth

BENEFITS

- Easy penetration for faster cuts
- Excellent heat and wear resistance
- Pulsating action allow the teeth to penetrate, resulting in faster cuts

APPLICATIONS

- Tool steel and high-speed steel
- Stainless steels
- Aluminum bronze alloys
- For machines with hydraulic feed control
- Ideal for cutting all steels and non-ferrous metals up to 40 HRC

All sizes available in 100' (30m) and 250' (75m) coils or welded bands.

All coils supplied within plus or minus 10% of ordered size.

Special products on request.

BI-METAL

INTENSTM

bi-metal
unique

FEATURES

- Strong tooth geometry
- M42 high-speed steel teeth combined with a fatigue resistant backing

BENEFITS

- Ideal for horizontal machines and light duty verticals
- Ideal for toolrooms and maintenance shops

APPLICATIONS

- Sheets, carbon steel solids and structurals, aluminum, copper, brass, cast iron, alloy steel, stainless steel etc.
- Small and medium solid dimensions

Width x Thickness in	mm	Pitch/Rake	Material No.

1/2" sizes available in 100' (30m) and 250' (75m) coils. 3/4" to 1-1/4" sizes available in 150' (45m) and 250' (75m) coils. 1-1/2" sizes available in 150' (45m) coils.

All coils supplied within plus or minus 10% of ordered size.

Furnished in welded bands or in random coils for all widths.

Special products on request.

FEATURES

- Split Chip Advantage Technology
- Multiple cutting edges-Multiple Edge Performance
- Blade thickness: 0.020"

BENEFITS

- Technology that allows faster cutting rates and increased blade life
- More cost-effective than conventional carbon steel blades
- Excellent fatigue, abrasion and shock resistance
- For contour cuts

APPLICATIONS

- Portable machines
- Vertical machines with reduced wheel diameter
- Ideal for metal workshops, construction and hobbyists
- Steel, iron, aluminum

CARBIDE / DIAMOND GRIT

CARBIDE

ADVANZ™ MC7

FEATURES

- Exclusive Starrett tooth geometry
- Carbide tipped
- Progressively ground trapezoidal tooth design
- Utilizes a progressive four tooth grind creating seven distinct chips
- Positive rake angle
- Submicron carbide (HV1600)

BENEFITS

- Cutting ferrous metals
- Higher productivity through reduced cutting time
- Precision cuts - superb surface finish
- Excellent "cost per cut" for production cutting
- Exclusive Starrett edge preparation - minimizes micro chipping
- Less wear compared to conventional triple chip

AVAILABLE WITH

TECHNOLOGY

APPLICATIONS

- Difficult to machine steels
- Tool steels, heat-treated steels, stainless materials
- Inconel, nickel alloys
- Titanium

MC7 (Seven Multiple Chips)

CARBIDE

ADVANTZ™ MC5

FEATURES

- Exclusive Starrett tooth geometry
- Carbide tipped
- Ground tooth produces 5 chips
- Utilizes a multiple chip grind with a high/low tooth sequence
- Positive rake angle
- Submicron carbide (HV1600)

BENEFITS

- Higher productivity through reduced cutting time
- Precision cuts - superb surface finish
- Excellent "cost per cut" for production cutting
- Starrett exclusive edge preparation - minimizes micro chipping
- The chip load is spread out over more teeth to facilitate longer life

MC5 (Five Multiple Chips)

AVAILABLE WITH
AMP
TECHNOLOGY

APPLICATIONS

- Alloy tool steels
- Aerospace alloys
- Stainless steel
- Nickel alloys
- Automotive aluminum casting blocks
- Cast iron

Furnished in welded bands.

Special products on request.

NOW AVAILABLE WITH
NEW AMP TECHNOLOGY!

The new AMP technology available on Starrett band saw blades increases cutting efficiency and blade life. A custom back edge enhancement on the blade generates a rocking motion while cutting which results in an increase in tooth penetration without added feed pressure. This cutting motion also serves to minimize surface contact area, increasing the blade life on hard to cut alloys.

CARBIDE

ADVANZ™ TS

Starrett® Advanz™ TS

FEATURES

- Carbide tipped teeth
- Triple chip tooth geometry
- Aggressive Rake angle

BENEFITS

- General purpose cutting
- Ferrous and non-ferrous metals
- Reduced cutting time - Higher productivity
- Precise cuts producing excellent finish
- Excellent "cost per cut" for production cutting
- Good for less rigid saw machines

APPLICATIONS

- High-alloy metals
- Aerospace alloys
- Stainless steel
- Nickel alloys
- Hard and abrasive materials
- For machines with hydraulic feed control
- Cast iron
- Brass, bronze, copper

CARBIDE

ADVANZ™ CS

Starrett® Advanz™ CS

FEATURES

- Carbide tipped teeth
- Triple chip tooth geometry
- Negative Rake angle

BENEFITS

- Ideal for cutting hardened materials
- High resistance to abrasion
- Reduced cutting time - Higher productivity
- Precise cuts produces excellent finish

APPLICATIONS

- Case hardened steel
- Steel for shafts and linear guides
- Case hardened materials up to 60 HRC

CARBIDE

CARBIDE

ADVANZ™ FS

Starrett® Advanz™ FS

FEATURES

- Carbide tipped teeth
- Triple chip tooth geometry
- Positive Rake angle

BENEFITS

- Ideal for cutting abrasive materials
- Exceptional resistance to fatigue, abrasion and shocks
- Reduced cutting time-Higher productivity
- Precise cuts and excellent finishing

APPLICATIONS

- Abrasive non-ferrous metals
- Cast materials and risers
- Composite materials
- Fiberglass
- Graphite
- Abrasive and hardwoods such as Tauari and others
- Robust vertical and horizontal machines

CARBON

CARBON

DURATEC™ SFB

Starrett® Duratec™ SFB

FEATURES

- Made from special high carbon steel
- Flexible back

BENEFITS

- Contour and straight cutting
- Economical
- Can be welded with "standard" welders

APPLICATIONS

- Easy-to-machine carbon steel
- Non-ferrous metals
- Composites and plastics
- Plywood and MDF
- Cardboard
- Ideal for light vertical and horizontal machines
- Mechanical workshops, toolroom, carpentry, etc.

Special products on request.

FEATURES

- Made of high-carbon steel with high Silicon-content
- Flexible backer for excellent fatigue resistance
- Special set design for increased frictional heat
- Special "air scoop" design teeth
- Fully hardened teeth and tempered back

BENEFITS

- Ideal for cutting materials that conventional blades cannot cut
- High resistance to wear and abrasion
- Teeth specifically designed to bring oxygen into the cut to burn up the material

APPLICATIONS

- Steel-belted radial tires
- Cuts thin, ferrous sections up to 5/8" (16mm)
- Weldments, sheet metal, unconventional shapes
- Vertical machines with speeds up to 15,000 SFPM

CARBON

BAND KNIVES

FEATURES

- Available with straight, scallop or wavy tooth cutting edges and a single or double edge bevel
- Made of high-carbon steel and stainless steel
- Razor edge

BENEFITS

- Quick, smooth and precise cuts, with excellent finishing
- Without material waste

APPLICATIONS

- Foam
- Rubber and soft plastics
- Cardboard and paper
- Cork

WOOD CUTTING

WOOD CUTTING

WOODPECKER™ PREMIUM

FEATURES

- A selection of blades ideal for a variety of woodworking applications
- Includes blades as thin as .020" for jobs such as contour cutting fine hardwoods to thicker blades for tough tasks including pallet work
- Hardened spring tempered back and ground, precision set teeth with positive tooth angles
- Thin kerf available
- Longer life and faster cutting with less feed
- High production rates and increased yields
- Can be re-sharpened

Width x Thickness		Pitch/Rake	Material No.

HK - Hook tooth profile | P - Positive rake | R - Raker set

SK - Skip tooth profile | RG - Regular tooth profile | S - Straight (zero) rake | R - Raker set

Available in 100' (30m), 250' (75m), 500' (150m), random length coils and welded bands

All coils supplied within plus or minus 10% of ordered size.

Special products on request.

WOOD CUTTING

BI-METAL WOODPECKER™ PRO

BI-METAL

FEATURES

- Manufactured from high-speed steel M42 containing 8% cobalt
- Specifically designed for all types of hardwoods and pallet dismantling applications
- Electron beam welded bi-metal construction optimizes cost per cut ratio
- Rockwell tooth hardness C67-69 ensures longer blade life

Width x Thickness		Pitch/Rake	Material No.

FOOD PROCESSING

FOOD PROCESSING

MEATKUTTER™ PREMIUM

MKP

SPECIFICATIONS

- Polished high carbon steel
- Hardened, ground teeth
- Hardened back

FEATURES

- USDA approved
- Accurate, balanced, sharp and fast cutting action with less kerf loss per cut.
- Accurate cuts with less effort
- Laser-etched blade identification guarantees product quality and satisfaction

MEAT TYPES

- Fresh, frozen, bone-in and boneless
- Broilers and turkeys
- Seafood

APPLICATIONS

- Suitable for kill/harvest and further process operations.
- Fresh/Frozen and prepared food

POWER HACKSAWS

POWER HACKSAWS

BI-METAL HSS-BS

CUTTING EDGE OF HIGH-SPEED STEEL

FEATURES

- Available in metric and inch
- Hardened and tempered high-speed steel teeth
- Tough alloy steel back resistant to shock and breakage

BENEFITS

- Alloy back resists fatigue under the most adverse conditions

APPLICATIONS

- Ideal for all general steel cutting
- Works well in a wide variety of applications, including interrupted cuts

CUTTING CHART FOR POWER HACKSAW BLADES-BS AND RS

Cross Section to be Cut	Material Thickness				Bow Speeds in Strokes per Minute **
	Up to 3/4" (20mm) Pitch*	From 3/4" to 1-1/2" (From 20mm to 40mm)	From 1-1/2" to 3-1/2" (From 40mm to 90mm)	Above 3-1/2" (Above 90mm)

PRECISION MAKES THE DIFFERENCE

NO CONTACT IS THE SOLUTION.

Profile360™ is an in-line, real-time, non-contact solution for continuously monitoring key profile dimensions in complex shapes such as rubber, ceramic, plastic, and wood-plastic composite extrusions, roll-formed metal profiles, and profiled wire.

RECOMMENDATIONS AND RESOURCES

RECOMMENDATIONS

BLADE BREAK-IN

Using the right break-in procedures for a bi-metal blade ensures longer blade life, faster cuts for a longer period of time and consistent performance. Conversely, blade life can be significantly compromised if the proper break-in procedures are not followed.

Softer material such as carbon steel and aluminum:

- A. Run the normal surface feet per minute (SFPM).
- B. Adjust the feed pressure to 50% the normal cutting rate for 50-100 square inches (323-645 sq.cm).
- C. Increase to 100% cutting rate.
- D. Avoid vibration.

Harder materials such as nickel-based alloys like inconel, hardened steels, tool steels and stainless steels:

- A. Run the normal surface feet per minute (SFPM).
- B. Adjust the feed pressure to 75% of the normal cutting rate for 25-75 square inches (161-484 sq.cm).
- C. Gradually increase cutting rate to reach 100% after 50 square inches (323 sq.cm).
- D. Avoid vibration.

New blade with razor sharp teeth

Tooth correctly broken in

Tooth incorrectly broken in

Start to cut material at reduced cutting rate

After break-in when the blade has fully entered the work-piece, increase the feed rate over a series of cuts until the recommended cutting rate is achieved.

RECOMMENDATIONS

BAND SAW BLADE INSTALLATION GUIDELINES

Always follow the machine manufacturer's instruction and recommendations for blade changes and the safe operation for the band saw machine. Starrett nor its employees shall not be held responsible for the accuracy or completeness of these guidelines.

The general information contained in the guidelines is intended to assist in the proper installation of band saw blades.

Proper blade installation achieves more efficient blade performance.

- Wear gloves when handling band saw blade

- Use eye protection, safety shoes, and hearing protection

- Select appropriate blade for cutting application
- Unfold blade properly. Do not throw. Throwing the blade will result in tooth damage that will reduce saw blade performance
- Install blade with saw teeth pointing in proper direction

- Apply appropriate tension to the blade
- Be aware of pinch points and keep hands and clothing clear of rotating blade

- Adjust guide arms to appropriate positions to workpiece
- Adjust blade guides for proper blade support
- Adjust chip brush to fully engage saw blade teeth to ensure proper chip removal

- Check hydraulic fluid levels when applicable
- Ensure appropriate cutting fluid placement and mix ratios as applicable per machine, cutting fluid, and blade manufacturer's recommendations

FOLLOW THESE INSTRUCTIONS CAREFULLY

- Follow all the safety instructions shown in the band saw machine operator's manual and on the machine labels. Recognize and read safety and warning signs such as Danger, Warning and Caution
- Follow the saw blade installation instructions on the specific make and model of the band saw machine requiring a blade change

BASIC BLADE CHANGE GUIDELINES

- Remove any chips from saw guides and band wheels
- Position chip brush away from saw
- Relieve saw blade tension and remove blade

ACCESSORIES

POCKET LASER TACHOMETER KIT WITH CASE No. S7793Z

- Powerful tachometer with 32 functions for measurements with or without contact
- From 200.000 RPM (optical measurement) to 20.000 RPM
- Measurement with contact up to 20.000 RPM
- Measurement with contact 2.000 m/min.(linear speed)
- Different measurement units: RPM, cm, inches, feet, yards etc

SAW TENSION GAGE FOR BAND SAW BLADES No. 682EMZ

- Check for proper tension in either English or metric
- Graduated in kg/cm² (0 to 4.000) and in pounds/in² (0 to 60.000)
- Supplied in a case with instructions

BAND SAW BLADE ALIGNMENT GAGE No. PT92925

This gage enables you to make sure your blade is running square to the cut.
